(54) Title: LCD PROJECTING SYSTEM HAVING DICHROIC MIRRORS FOR POLARIZATION CONVERSION

(57) Abstract: This invention relates to a system (200) for projecting an image on a display comprising: a first dichroic means (212) receiving coloured light beams (204, 206, 208) and adapted to transmit the one (204) and to reflect the others (206, 208), a second dichroic means (220) receiving the other light beams (206, 208) and adapted to reflect a second (206) and to transmit a third (208) light beam. The system (200) further comprises a first, second and third polarizing means (216, 304, 222, 404, 226, 602) being adapted to transmit light polarized in a desired direction, and a reflective rotating means (210, 202) receiving light beams (204, 206, 208) polarized in an undesired direction reflected from at least one of the first, second and third polarizing means (216, 304, 222, 404, 226, 602), and which reflective rotating means (210, 202) is adapted to convert the light polarized in the undesired direction to converted light polarized in the desired direction and reflect the converted light back to the first, second and third polarizing means (216, 304, 222, 404, 226, 602).
